PROFESSIONAL SUMMARY

Motivated and tech-savvy MCA student specializing in Cloud Computing and DevOps, with a strong foundation in computer applications. Eager to kickstart a career in IT, contribute to impactful projects, and continuously grow through hands-on learning and innovation.

EDUCATION

Chandigarh University

- Master of Computer Applications (MCA) – Cloud Computing and DevOps 2024 – Present

GGDSD, Chandigarh – Panjab University

- Bachelor of Computer Applications (BCA) – Computer Applications 2021 – 2024

TECHNICAL SKILLS

- Languages:** Python, SQL (PostgreSQL, MySQL)
- Cloud & DevOps:** AWS (EC2, S3, EKS), Terraform, Jenkins, ArgoCD
- Containers & Orchestration:** Docker, Kubernetes, AWS EKS, Container Registry
- Web & APIs:** Flask, REST APIs, Nginx, Microservices Architecture
- Tools & Practices:** Git, GitHub, CI/CD Automation, Infrastructure as Code, Monitoring(Grafana)

PROJECTS

Hybrid Deployment: Virtual Machine + Container Orchestration

- Hybrid Infrastructure Architecture:** Designed and deployed a multi-node cluster using VMware and Docker Swarm, configuring bridged networking to enable seamless orchestration across virtualized Manager and Worker nodes.
- Automated CI/CD Pipeline:** Built an end-to-end automation pipeline using Jenkins and GitHub, leveraging the Docker Remote API (Port 2375) to trigger real-time application deployments directly from source control.
- Microservices & Data Persistence:** Orchestrated a 5-tier application (Python, Node.js, Redis) with PostgreSQL for data persistence, implementing automated load balancing and service scaling to ensure high availability.

Real-Time Analytics Dashboard

- Built a containerized real-time analytics architecture using Docker Compose, integrating Redis as an in-memory data store, FastAPI as a backend service, and Grafana for monitoring and visualization.
- Designed a modular microservice-style system with clear separation between data ingestion, API layer, caching, and visualization, enabling scalability, maintainability, and independent service updates.
- Implemented a real-time data pipeline that collects live API data and system metrics, stores them in Redis with persistence, exposes them through REST APIs, and displays continuously updating dashboards in Grafana.

AI-Powered Cloud Optimization & Self-Healing Platform

- Designed a modular, agent-based architecture combining Next.js frontend, FastAPI backend, rule-driven AIOps engine, and an autonomous self-healing agent, with clear separation between FinOps, DevSecOps, and runtime operations.
- Built a production-grade SaaS dashboard UI using Next.js App Router, Tailwind CSS, and shadcn/ui, featuring role-based sections for cost analytics, AI insights, security posture, and real-time infrastructure health.
- Implemented end-to-end automation including cloud cost analysis, explainable AI recommendations, CI-driven DevSecOps security gates, and AI-powered self-healing that detects container failures, analyzes logs via LLMs, and restores services automatically.

CERTIFICATIONS AND ACHIEVEMENTS

- **Professional Certifications:** C# Programming & React.js from Infosys , AWS Cloud Practitioner (In Progress)
- **Extracurricular:** First Place Winner & Top Performer – University Level Football 2021
- **Community Service:** Active participant in community service initiatives and leadership programs
